Altho I have a Gonset G-76 as my prime AM rig (and a Henry 2K if I need extra punch), I like the FT-980CAT.

I have two of them and can hook them up to a PC thru the CAT connection. I can even run them in what is called SO2R (Single Operator 2 radios) for Contesting and Fast, Dxing.

I can run CW, AM (probably the same circuit as the FT-901 and 902), SSB, RTTY, PSK31 and other modes. One is opened up for General Transmit so I can use it on the new 60 meter band.   Yep, it puts out 25 watts out of good AM and I have that Henry 2K for 350 watts out.

The original price with options (CW Filter, Keyer, Speaker
with patch or Audio filter) could run well over $2K. They sell for $450 now.

The FT-980 was upgraded to the FT-1000D with the addition of a second full VFO, more Memory, and a power supply that allows the MRF 422's run 200 watts. Now Yaesu says the FTDX-9000 has FT-1000D DNA. So I am betting the good AM is still there if you want to spend the $$$ for it.

The draw back for any of these classic sand state rigs is that parts are hard to replace.   For example Kenwood says
some parts for the Kenwood TS-940 are no longer available. So you better get the Technical manual for that classic rig and maybe a spare or two for parts.

Hello Everyone,

What started out as a two sentence footnote in one
document somehow ballooned into a new radio related
topic worthy of some documentation. Together with Spud
Roscoe VE1BC in Halifax, we have cobbled a short
history on weather ships - another bygone era. This
was an international venture which started in 1946 and
terminated in 1981. Up to several weeks ago, I had no
idea that such a system even existed.

I think it largely depends on whether you want to work CW, or SSB. The
best SSB radio I have ever used is my NCX-5 MKII. Great audio on both
transmit and receive, decent mechanical digital frequency readout,
plenty of features, and rarely requires any work. For the tune-up
challenged, I recommend the Ten Tec Delta II. I have had the Argonaut
II since about 1992, and it has made 2 trips back to the factory. The
second time was unnecessary. The only problem I know of with these rigs
is that the LCD backlight wears out. All Electronics has a nice cheap
one that can be easily trimmed to fit with a scissors. Great
performance on CW and SSB. I now use the Argo as the IF rig on VHF.
Does a great job. I use the Ten TEc Omni V with a full set of filters,
now on HF, generally with my Hallicrafters keyer. Have to have some
tubes in there someplace. I have had a great time with my Gonset
GSB-100 exciter and either a National HRO-50T1 or Drake 2B receiver.
Back during the last F2 season on 6 meters, I hooked up the Gonset, the

Drake, and a P&H transmitting converter and a Tapetone receiving converter. I worked Greenland with a fine signal report. That was quite the thrill! I suspect that a younger ham, say in their 30s (hi) who gets the chance to play with the older equipment after learning the basics with sand state rigs will thoroughly get hooked on tubes. For me it is not so much nostalgia, but rather that it takes some skill to use the older stuff, and even so it is a whole lot easier than learning how to program one of the newer menu based rigs.

Gosh it seems that there's a big slant toward items folks presently use & own. Next in the consensus line is the FT-101B. I like, no, love 'em too.

But I've gotta chime in on my present runners. That's the Icom IC-703 and the Heath SB-102A.

The 703 has everything for menu mavens & kids will probably love it. If you buy a 1st print version, there's no 6m & price low.

Has built-in AT & will run for hours on 12V R-S lighting gel cell.

And the '102. A KWM-2 in serviceable clothing. And something that probably doesn't work if you buy fm ebay. But problem fairly easily solved if you're mindful that most of those 1/2w 33k & 68k resistors in the thing have gone open-ckt... have never seen anything like it. In process of trouble shooting, you & 'the kid' will nuzzle into guts of how every filter-type ssb xcvr has worked since 1956 KWM-1. Including the IC-703 but excluding recent top $ do-pretties that realy generate ssb w. a dsp.

Back to '703 and on to 'sploits. Worked Provenicales W7VV/VP5 (Turks & Caicos) on 20 CW 10 days back on 20m. 3x .5-wave dipole & 10w & luck 'rm' got heard in a pileup lull.

So that's my 2 cents

Fellows,

I am in need of a matching speaker for my HQ-129-X, the kind that does not
have the back enclosed.
I am not subscribed to the Hammarlund list so if someone who is a member
will post this request there for me I will be most appreciative.
Am about to get my favorite station replicated. 100V, 600L, HQ-129-X with
certain important but not complicated mods, Johnson electronic T/R switch,
mode B slicer and a 3" Philco service scope to watch the incoming as well
as my own signals going out.
This set-up I used from early 50's until into the 80's for the best hamming
I
have ever experienced!
Take care,

Ken   N5CM

Hi folks,
    I'm not sleepless in Seattle, I'm not even there, but I could use some help from someone out there.
    I have a boatanchor receiver there that needs to be packed for shipment to me in NC. The present owner is wheelchair bound, and can't do the task. If someone could pick it up from him, near Green Lake Reservoir & N.E. 75th St., and either pack it or get it to someone who could pack it we would be greatly appreciative.   I can arrange shipping thru Fedex, even a Fedex pickup at your location. Of course I would re-imburse for your expenses and troubles. A boatanchor bonus is a great possibility for the obliging helper.
    With holiday shipping rush coming up, if it can be done in the next week it might beat the rush, otherwise it might be better to wait until after 1/1/07. I will email all details to anyone who could help.
many thanks & 73,

Al,

If no one steps up, you can probably find a packing
service that will pick up the anchor, pack it and
ship it. That's how I got a "pickup only" R-391
from Connecticut to Minnesota. It was in an upstairs
apartment and the owner had a bad back.

Packing services may also ship. I used Barrieaux Air
Freight. Picked it up at MSP airport in excellent
shape (wooden crate) for $150 total.

Not cheap, but if it's the only way to go...

Regards,
Bill Hawkins

Not familiar with that one although I know it is popular.

I have a pair of H-P 8656's here (one an "A" model, the other a "B").
Not much difference between them. Covers .1 to 990 MHz. The usual
internal/external modulation, programable step atten output, etc.

Groups,

A friend of mine who runs an MV open house with a re-enactor battle every year needs to build several squib firing boxes. He needs around 50 pieces of standard 15/32" mounting hole DPDT Center Off toggle switches. Detented in all three positions (no spring return). Solder terminals. Current and voltage ratings not critical.

He also needs around 110 of what I call push posts (as opposed to binding posts) for hooking up the WD-1A field wire to the squibs. These can be the type with the hole through them as found for antenna wire connection on many 40's vintage mil radios. Or (and these are preferred) the type with the side opening instead of just a hole when you push the spring down. These latter are fairly common on newer military wire equipment I think. And I'm almost sure I saw someone within the past couple of years with a bag full of them but can't recall where.

I called Fair but Phil came up empty on the switches and is still looking for the push posts.

Bob,

I've recently seen the side entry spring loaded terminal posts when looking for audiophile grade speaker terminal posts. You will find them available from DIY and audio goodie distributors. Maybe on the 'bay also.

The toggles can be found at Newark, Mouser, Allied, etc.

Hank,

No. And I've had several people ask that. But a Fahnstock clip doesn't look like a post. A post is more often than not a cylindrical solid sticking out of a surface. Fence post, hitching post, whipping post, binding post, etc. A push post looks like a common binding post but is spring loaded instead of

threaded to secure the wire. The antenna posts on Command Set receivers, and the antenna and ground posts on TCS receivers, BC-348 receivers, etc. are all push posts.

Robert, IIRC are not those called Farnstock clips with push spring on
the side.
  I would think Mouser, small parts, Allied would have them.

Subject: Transformer Case Outline Pinouts
Content-Type: text/plain; charset=us-ascii; format=flowed
Content-Transfer-Encoding: 7bit

Hello - I am trying to find a pin connection diagram for the UTC special series S-17 transformer. I have looked at the on-line catalogs and they do not have the pinouts, only the specs. The one document on BAMA does not have the "Special Series" transformers.

Thanks,

Dave N7RK

Content-Type: text/plain; charset=us-ascii; format=flowed
Content-Transfer-Encoding: 7bit

I'm in need of the Power Supply schematic for the Duo Bander 84 (80/40m transceiver).
The p/s number I believe is the AC-384.
Thanks.
Bob

Subject: Atlanta area Free left-overs

Left overs from Lawrenceville

Like the english "boxing day" where the lord of the manor
gives away remains of Christmas feast

In this case it's what didn't go from the estate stuff I
brought to the Lawrenceville hamfest. And stuff I
hadn't room to bring.

Examples

    Acorn tubes. Enough for several electronic squirrels

    Relay racks. At least four

    RTTY 'cadillac stuff' from Northern Radio (Mamaroneck, NY - looks
    like TMC stuff)

     RTTY H-B TU

  and on & on... last stop b4 dumpster

  Considering being on premises near Emory U between 11A & 1P
  Sat. Please no questions like "any 39k 2W alan bradley mustard
  jars?" - JUST COME AND GRUB pse

I'm in need of a cabinet for a SR160/SR500. If anyone has a parts unit
available I'd take it (could use a knob or two also) but mainly need the
cabinet.

Thanks
Bob

I'm looking for something to refinish a small cabinet that was
originally about the same shade of gray hammertone as an Astatic
microphone base. I've looked around for hammertone paint, but all
I've come across seems to be textured.

Thanks

Tom

Hi Tom,
    I've used Hammertone a while ago, Rustoleum I think, and it's not
textured. Still have the can here (somewhere). Bought some Rustoleum
Textured Black last week, it is textured some, ends up a cross between
wrinkle (pebble?) and orange peel.
    They've got all sorts of "designer paints" now, I think Martha
Stewart's probably got somebody making Jamocha Almond Fudge paint even.

Hi Tom,

Lowes carries some, as does Wally World, if you can't find a Mom and Pop
hardware store to purchase it from.
